CARE & CLEANING

Thank you for purchasing custom cabinets from Bayer Interior Woods, we are certain that you will find your cabinets were made with quality craftsmanship.

We recommend the following for care and maintenance to keep your cabinets clean and the wood from becoming dry.

1. Dust and remove residue using a soft lint-free cloth (micro-fiber is recommended). Avoid using abrasive pads.
2. Dust cabinets following the grain of the wood.
3. Polishing stained products. Use furniture polish a couple of times each year, this will prevent the wood from appearing dry.

   Disclaimer: Using polish on painted products may damage the paint
   Using silicones or waxes on stained products may damage the finish

4. Use only mild cleaners that are wood safe. Always check labels for manufacturer recommendations before use.
5. Keep the wood surface dry. Clean any spills, splatters and water spots immediately, failure to do so may cause damage to your wood surface. Do not use wet cloths on cabinets.
6. The interior can be washed using a soft cloth and a mild cleanser for tough stains.
7. Excessive heat and/or moisture will damage your cabinets, use care in placing appliances near cabinet surfaces.

We recommend avoiding the following on and around your wood product:

- Abrasive cleaning pads
- Steam cleaners
- Strong chemicals
- Excessive heat
- Water
